Client: Anonymous  
Supplier: Analytical Solutions & Products BV  
Number of analyzers connected to AIM: starting with 4 CEMS analyzers

Location: Europoort Rotterdam  
Delivered: May 2021

**Emission monitoring is essential for reporting emission values on regular base to emission authorities.**

### What is the case

Plant operations needs to report emission values on regular base to emission authorities. Validation and calibration results of 4 stacks need to be logged continuously. Therefore, a breakdown of these measurements needs to be prevented. There is a need for easy use and interpretation of the measuring results. In addition, further discussion with authorities needs to be prevented, by presenting results in an accurate and standardized way.

***ASaP provided a solution that solved all mentioned requirements.***

### The result

By carefully monitoring the overall status of the emission monitoring system via different graphic images the “loss of measurement” is prevented. Easy reporting prevents discussion with authorities and gives a calculation of emission load.
