

Job Profile

Service Specialist Analysis

Analytical Solutions and Products (ASaP) is a company with a flexible, dedicated, and growing team, in support of a clear goal:

To supply practical solutions for our customer analytical needs.

This applies to both on-line process analyses and laboratory and experimental analyses. ASaP's practical solutions are based on more than 50 years of joint experience, specific training, knowledge of the ASaP team members and, finally, the pleasure in our work.

The renowned and complementary range of services and products of ASaP contributes significantly to providing the right solution for analysis issues. The products, such as analyzers and associated sampling and conditioning components and systems, are particularly suitable for gas and liquid compacted samples. In addition, the team spirit and the collaboration with partners enable us to design, build, install locally and commission tailor-made systems. All these products and systems can be carried out according to the latest guidelines, such as ATEX.

Customers apply the products and solutions that ASaP offers worldwide and use them for process control, product quality monitoring, energy savings and control of environmental emission standards and permits.

Tasks:

1. Execution of maintenance and call-out contracts
2. Maintenance and repair of analysis equipment and sample systems
